What groups of morphological features are distinguishing in the cluster relative to the untreated samples? (maximum of absolute m-score for the features belonging to the same category; m-score defined as median of a

Which individual morphological features are distinguishing in the gene relative to the untreated samples? Blue/Red means the feature has a positive/negative z-score. Size is proportional to the z-score value.

Compound IDs and common names (where available); blue/red colored	Chemical	Mean pairwise replicates correlation of the	Correlation between		How similar is the compound signature to the genes in this	the gene relative to the untreated samples	Distinguishing individual features for the compound relative to untreated samples. Black means a mismatch; i.e. active (= high z-score in magnitude) in the compound, and either inactive (= small z-score in magnitude) or oppositely active in the gene Number of PubChem assays in which the compound was tested; assays in which the compound was active are itemized.
box means the matching compound is positively/negatively correlated with the cluster	structure	compound signature (95th DMSO replicate correlation is 0.52)	compound the gene	against the gene using L1000 profiling	experiment? (Yellow and red lines correspond to top/bottom 1st and 5th percentile DMSO correlation to all the genes)
